Round Motorized Take-Off Damper

Avoid changing duct work to add zoning

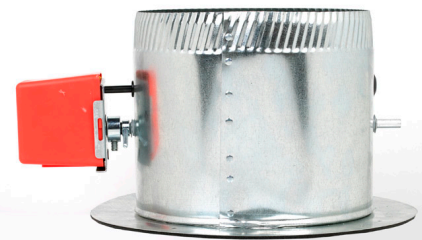

- Combination Take-Off and Motorized Damper
- Eliminates the need for both a take off collar and motorized damper
- Saves Space
- Saves Cost
- Adhesive Duct Seal
- Shut Off Unused Rooms
- Eliminates the need for constant manual adjustment.

Another first from ZONEFIRST. The Round Motorized Take-Off Damper combines both a take off collar and motorized damper into one unit. This combination unit saves time and cost upon installation and provides zone temperature control for each branch run. Multiple runs are easily daisy chained to get up to Ten (10) dampers wired together on a single zone, using ZONEFIRST's exclusive Plug-In Damper motors.

When you haven't got room to run a second trunk duct, or already have an existing system with a single trunk, the RT series of dampers allows you to easily zone any system. Remove the old leaky spin-in or tab collar take off, adhere the RT damper to the side of the duct and re-connect the branch duct. For insulated ducts, the RT motor sits away from the take-off providing ample room to slide insulation between the motor and the take-off.

The RT damper can be ordered with ZONEFIRST's exclusive Plug-In Damper Motor, Model RTP (includes 25' modular cord); a 24V Spring Return, Model RTS; or a 24V, 3-Wire power open-close motor, Model RTM. The RTP and RTM have LED position indicators. The RTS and RTM dampers can be set to a minimum position. All models are the same list price.

INTRODUCTORY			
Three Wire	Plug-In	Spring Return	List Price
RTM06	RTP06	RTS06	\$150
RTM08	RTP08	RTS08	\$154
RTM10	RTP10	RTS10	\$158
RTM12	RTP12	RTS12	\$162
RTM14	RTP14	RTS14	\$170
